

FUSB303B Autonomous USB Type-C™ Port Controller with I²C and GPIO Control

FUSB303B

QFN12
CASE 722AG

Description

The FUSB303B device is a fully autonomous USB Type-C™ controller optimized for 15 W or less applications. The FUSB303B offers CC logic detection for Source Port role, Sink Port role, DRP, and accessory detection support, as well as Dead Battery support as defined in USB-C specifications. The FUSB303B features configurable address I²C access to support multiple ports per system or it can operate autonomously configured by just pins. The FUSB303B features ultra-low power during operation, and an ultra-thin, 12-Lead QFN package.

Features

- Fully Autonomous USB-C™ Port Controller
- Supports Latest Type-C™ Specification Release 1.3
- Source, Sink, and DRP Port role Configuration with Optional Accessory Support
- Try.SRC and Try.SNK modes for Preferring Source Role or Sink Role Respectively
- V_{DD} Operating Range, 2.85–5.5 V
- Typical Low Power Operation: I_{CC} < 10 μA
- GPIO and I²C Configuration
- Max 28 V DC Tolerance on ID, VBUS_DET, CC1 and CC2
- Dead Battery Support (Sink Port role when No Power Applied)
- 4 kV HBM ESD Protection for Connector Pins
- Small Packaging, 12 Lead QFN
(1.6 mm × 1.6 mm × 0.375 mm)

Applications

- Smartphones
- Tablets
- Laptops
- Accessoires
- Industrial
- Power Banks

1. Orientation decoded on this pin after a Sink Debug Test System (DTS) attached to FUSB303B.
2. Orientation decoded on this pin after a Source Debug Test System (DTS) attached to FUSB303B.

High Voltage Tolerance on CCx and VBUS Pins

The FUSB303B has additional protection for the type C connector pins where it can tolerate up to 28 V on VBUS, CC1 and CC2 to protect against any misbehaving Type C device connect to the FUSB303B. If VBUS tolerance is needed higher than 28 V, a 900 kΩ resistor can be used externally along with a Transient Voltage Suppressor (TVS) to achieve almost any higher voltage tolerance dictated by the TVS chosen.

Dead Battery

If power is not applied to FUSB303B and it is attached to a Source device, then the Source would pull up the CC line connected through the cable. The FUSB303B in response will turn on the pull-down that will bring the CC voltage to a range that the Source can detect an attached device and turn on VBUS.

GPIO Mode, Debug and Audio Accessories

When VDD is active and on the trailing edge of EN_N, the FUSB303B will sample PORT/DEBUG_N to determine if the FUSB303B operates as a Source (HIGH), Sink (LOW) or DRP (floating). Subsequently the PORT/DEBUG_N will be set LOW when a Debug Test System is detected.

If the FUSB303B is configured as a Sink (PORT/DEBUG_N = LOW upon enable), the FUSB303B will detect a Debug Test System if Rp is detected on both CC1 and CC2. Devices that support orientation detection will also have ADDR/ORIENT set based on the levels detected for CC1 and CC2. ID will be set HIGH-Z.

If the device is configured as a Source (PORT/DEBUG_N = HIGH upon enable), the FUSB303B will detect a Debug Test System if Rd is detected on both CC1 and CC2. Devices that support orientation detection

will also have ADDR/ORIENT set based on the levels detected for CC1 and CC2. ID will be set LOW.

The FUSB303B also supports DRP toggling for detecting debug test systems. When PORT/DEBUG_N= float upon enable, the FUSB303B can detect both Source and Sink debug test systems depending on how it resolves its role as a Source or Sink. Then it acts either as a Source or Sink as described above.

The FUSB303B will report Debug Test System detection via the Type I²C register as well. The detection is the same as described above except Source, Sink and DRP roles are configured via the Portrole register. This Portrole register setting has higher priority over the PORT/DEBUG_N pin state for Source/Sink/DRP port role.

The FUSB303B will set INT_N/OUT3 = LOW in GPIO mode when an Audio Accessory is detected. The FUSB303B will report Audio Accessory detection via the Type I²C register as well when Audio Accessory detection is configured via the Portrole register.

FORCE.SNK and FORCE.SRC Functionality

In some cases, a device may need to force its role to a Sink or a Source especially if two DRP devices are connected together and they have connected in the wrong device role. In that case, the FUSB303B has incorporated a function that allows it to be forced into either Sink or Source. However, if it cannot complete this role change, the FUSB303B will resume its previous role and flag success or failure with I_FRC_SUCC and I_FRC_FAIL interrupts respectively.

Remedial Actions

In some cases, a device may start to detect a Source or Sink but get caught in a loop trying to resolve the detected device. In that case the FUSB303B provides functionality to resolve

FUSB303B

to a stable attached state. This functionality can be turned on and off via the REMEDY_EN and DCABLE_EN bits. Multiple cases are tried and some of the register settings will be changed to try to achieve stable attach. The I_REMEDY interrupt will allow the processor to know that this functionality has been triggered.

AUTOSNK Mode

When the FUSB303B is powered directly from VBAT the AUTO_SNK_EN mode can be used to prevent the application from attaching as a Source when the battery is weak or disconnect and attach as a Sink. With AUTO_SNK_EN enabled the port will attempt to configure

as a Sink when attached to another DRP. If connected to another Sink, the port will detach. The threshold at which AUTOSNK can be triggered can be programmed via the AUTO_SNK_TH bits. The I_AUTOSNK interrupt is triggered whenever this functionality is invoked.

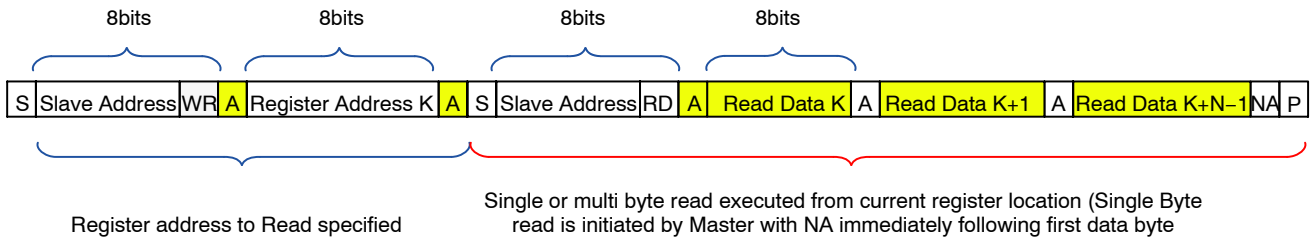

Power Up, Initialization and Reset, Interrupt Operation, I²C Interface

The FUSB303B includes a full I²C slave controller. The I²C slave fully complies with the I²C specification version 6 requirements. This block is designed for fast mode. Examples of an I²C write and read sequence are shown Figure 5 and Figure 6 respectively.

NOTE: Single byte write is initiated by Master with P immediately following the first data byte and slave A

Figure 5. I²C Write Example

Register address to Read specified

Single or multi byte read executed from current register location (Single Byte read is initiated by Master with NA immediately following first data byte)

NOTE: If Register is not specified Master will begin read from current register. In this case only sequence showing in Red bracket is needed

| | | | | |
|---|----------------------|--------------------------------|--------------------------------------|-------------------------|
|  | From Master to Slave | S Start Condition | NA NOT Acknowledge (SDA high) | RD Read =1 |
|  | From Slave to Master | A Acknowledge (SDA Low) | WR Write=0 | P Stop Condition |

Figure 6. I²C Write Example

When power is first applied, the FUSB303B will power up in the configuration set by the PORT/DEBUG_N input with Audio Accessory Support enabled and all interrupts masked. If the ADDR/ORIENT input is HIGH or LOW (I²C mode) the local processor can then re-configure the FUSB303B to the desired mode and clear the global interrupt mask bit, INT_MASK using the I²C interface. To enable device function in I²C mode, the register bit ENABLE in CONTROL1 must also be asserted. The INT_N/OUT3 pin is an active LOW, open drain output. This pin indicates to the host processor that an interrupt has occurred in the FUSB303B which needs attention. The INT_N/OUT3 pin is in a high impedance state by default after power-up or device reset, and the global interrupt mask (INT_MASK in Control register) is set. After INT_MASK bit is cleared by the local processor, the INT_N/OUT3 pin

stays high impedance in preparation of future interrupts. When an interruptible event occurs, INT_N/OUT3 is driven LOW and is in a high impedance state again when the processor clears the interrupt by writing a one in the position of the interrupt bit that was set. Subsequent to the initial power up or reset; if the processor writes a “1” to global interrupt mask bit when the system is already powered up, the INT_N/OUT3 pin stays in a high impedance state and ignores all interrupts until the global interrupt mask bit is cleared. If an event happens that would ordinarily cause an interrupt when the global interrupt mask bit is set, the INT_N/OUT3 pin goes LOW when the global interrupt mask is cleared.

Interrupt bits hold their value and to clear a specific interrupt, a “1” needs to be written to that interrupt bit.

FUSB303B

I²C Address

The ADDR/ORIENT bit HIGH or LOW is indicated in bit 5 of the slave address shown in Table 3.

Table 3. FUSB303B I²C SLAVE ADDRESS

| Name | Size (Bits) | Bit 7 | Bit 6 | Bit 5 | Bit 4 | Bit 3 | Bit 2 | Bit 1 | Bit 0 |
|---------------|-------------|-------|-------|-------------------|-------|-------|-------|-------|-------|
| Slave Address | 8 | 0 | 1 | ADDR/ORIENT state | 0 | 0 | 0 | 1 | R/W |

Table 4. ABSOLUTE MAXIMUM RATINGS

| Symbol | Parameter | | Min. | Max. | Unit |
|----------------------|--|--|---------|------|------|
| V _{DD} | Supply Voltage from V _{DD} | | -0.5 | 6.0 | V |
| V _{CON} | ID, VBUS_DET, CC1 and CC2 voltage | | -0.5 | 28.0 | V |
| V _{IO} | PORT/DEBUG_N, ADDR/ORIENT, INT_N/OUT3, SDA/OUT1, SCL/OUT2 pins voltage | | -0.5 | 6.0 | V |
| V _{IO} | EN_N | | -0.5 | 2.0 | V |
| T _{STORAGE} | Storage Temperature Range | | -65 | +150 | C |
| T _J | Maximum Junction Temperature | | | +150 | C |
| T _L | Lead Temperature (Soldering, 10 seconds) | | | +260 | C |
| ESD | IEC 61000-4-2 System ESD with external TVS | Connector Pins (VBUS, CC1 & CC2) | Air Gap | 15 | kV |
| | | | Contact | 8 | |
| | Human Body Model, JEDEC JESD22-A114 | Connector Pins (VBUS_DET, CC1 and CC2) | 4 | kV | |
| | | Others | 2 | | |
| | Charged Device Model, JEDEC LESD22-C101 | All Pins | 1 | | |

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

Table 5. RECOMMENDED OPERATING CONDITIONS

| Symbol | Parameter | Min. | Typ. | Max. | Unit |
|------------------|-----------------------|------|------|------|------|
| V _{BUS} | VBUS_DET Voltage | 4.0 | 5.0 | 22 | V |
| V _{DD} | Supply Voltage | 2.85 | 3.3 | 5.5 | V |
| T _A | Operating Temperature | -40 | | +85 | C |

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

| $v_{Rd-1.5A}$ | Rd 1.5 A Current Detection Threshold for Sink | 1.16 | 1.23 | 1.31 | V |
| $v_{Rd-3.0A}$ | Rd 3 A Current Detection Threshold for Sink | 2.04 | 2.11 | 2.18 | V |
| $v_{VBUSthr}$ | VBUS_DET Threshold when VBUSOK is deasserted | 2.9 | 3.3 | 3.67 | V |
| $t_{VBUSdeb}$ | VBUS_DET debounce time before VBUSOK is deasserted only (see tDeb below for VBUSOK being asserted) | 10 | | 20 | ms |
| v_{VBthLH} | VBUS_DET Threshold when VBUSOK is asserted | 3.67 | 4.07 | 4.48 | V |
| t_{Deb} | VBUS_DET debounce time before VBUSOK is asserted | 250 | | 500 | μs |
| $v_{VSAFEthr}$ | vSafe0V VBUS_DET Threshold | | | 0.8 | V |
| $v_{VSAFEthrHys}$ | VSAFE0V VBUS_DET Threshold hysteresis | | 50 | | mV |
| $r_{VBUSleak}$ | Leakage between VBUS and GND when VBUS not sourced | 72.4 | | | $\text{k}\Omega$ |
| $r_{VBUSdschg}$ | Effective resistance from VBUS and GND when VBUS is being discharged from vSafe5V $V_{DD} (V) = 2.85\text{ to }5.5$ | | | 2 | $\text{k}\Omega$ |
| r_{Pullup} | Pull up resistor to VDD value on EN_N pin $V_{DD} (V) = 2.85\text{ to }5.5$ | | 6 | | $\text{M}\Omega$ |
| $v_{AUTOSNKthr}$ | Weak Battery VDD Threshold | -3% | AUTO SNK_T H | +3% | V |
| R_a | Resistor for discharging VCONN $V_{DD} (V) = 2.85\text{ to }5.5$ | | 1 | | $\text{k}\Omega$ |

3. VDD = 3 V when 3 A current advertised.

FUSB303B

Table 7. CURRENT CONSUMPTION

| Symbol | Parameter | VDD (V) | Conditions | TA = -40 to +85°C TJ=-40 to +125°C | | | Unit |
|----------|--|--------------|---|---------------------------------------|------|------|------|
| | | | | Min. | Typ. | Max. | |
| Idisable | Disabled Current | 2.85 to 4.35 | Disabled State EN N = HIGH or not connected | | | 5 | μA |
| Istby | Unattached Sink (3.3 V I ² C mode without AUTOSNK or accessories) | 2.85 to 4.35 | Nothing attached | | 5 | 10 | μA |
| | Unattached DRP or Source (3.3 V I ² C mode without AUTOSNK or accessories) | | Nothing attached, Internally Toggling | | 10 | 15 | μA |
| Iattach | Attached Source or Sink (3.3 V I ² C mode without AUTOSNK or accessories. Not including Ixxx_CCX current) | 2.85 to 4.35 | Attached as a Sink or Source | | 10 | 15 | μA |

Table 8. TIMING PARAMETERS

| Symbol | Parameter | TA = -40 to +85°C TJ=-40 to +125°C | | | Unit |
|----------------|--|---------------------------------------|---------|------|------|
| | | Min. | Typ. | Max. | |
| tCCDebounce | Debounce Time for CC Attach Detection (TCCDEB[2:0] = 011) | -33% | TCCDE B | +33% | ms |
| tPDebounce | Time a Sink port shall wait before it can determine it is detached | 10 | 15 | 20 | ms |
| tTryCCDebounce | Time a port shall wait before it can determine it is re-attached during the try-wait process | 10 | | 20 | ms |
| tRpValueChange | Time a Sink port shall wait before it can determine there has been a change in Rp | 10 | | 20 | ms |
| tSRCDisconnect | Time a Source shall detect the SRC.Open state | 10 | | 20 | ms |
| tErrorRecovery | Time staying in the ErrorRecovery State if sent there via the ERROR_REC bit or by a change of port roles | 25 | 50 | 100 | ms |
| tDRPTry | Time staying in the Try.SRC/SNK prior to transition to TryWait.SRC/SNK State | 75 | | 150 | ms |
| tTryTimeout | Time to discharge VBUS before giving up for cases where VBUS is always on. | 550 | | 1100 | ms |
| tDRP | Sum of tDRPTogSNK and tDRPTogSRC | -33% | T_DRP | +33% | ms |
| tDRPTransition | Time DRP shall complete transitions between Source and Sink roles | 0 | | 1 | ms |
| tDRPTogSNK | For DRP Operation, Time Spent in Unattached.SNK before going to Unattached.SRC State | DRPTOGGLE = 00 (Note 4) | | 70 | % |
| | | DRPTOGGLE = 01 | | 60 | % |
| | | DRPTOGGLE = 10 | | 50 | % |
| | | DRPTOGGLE = 11 | | 40 | % |
| tDRPTogSRC | For DRP Operation, Time Spent in Unattached.SRC before going to Unattached.SNK State | DRPTOGGLE = 00 (Note 4) | | 30 | % |
| | | DRPTOGGLE = 01 | | 40 | % |
| | | DRPTOGGLE = 10 | | 50 | % |
| | | DRPTOGGLE = 11 | | 60 | % |
| tEN | Time from EN_N LOW and VDD active to I ² C access available | 2.85 to 5.5 | | 100 | ms |

Table 9. TIMING PARAMETERS (continued)

| Symbol | Parameter | | T _A = -40 to +85°C T _J = -40 to +125°C | | | Unit |
|----------|--|-------------|---|------|------|------|
| | | | Min. | Typ. | Max. | Unit |
| tRESET | Soft Reset Duration | 2.85 to 5.5 | | | 100 | ms |
| tAUTOSNK | Debounce time to detect Weak Battery VDD Threshold to trigger I_AUTOSNK if AUTOSNK mode enabled for both entering AUTOSNK and exiting AUTOSNK V _{DD} (V) = 2.85 to 5.5 | | 10 | 15 | 20 | ms |

4. Default Value when Configured in GPIO Mode (ADDR/ORIENT = Float)

Table 9. IO SPECIFICATIONS

| Symbol | Parameter | V _{DD} (V) | Conditions | T _A = -40 to +85°C T _J = -40 to +125°C | | | Unit |
|--------|-----------|---------------------|------------|---|------|------|------|
| | | | | Min. | Typ. | Max. | |

OPEN DRAIN OUTPUT PINS (ID, INT_N/OUT3)

| | | | | | | | |
|-------------------|--------------------|-------------|------------------------|--|--|-----|---|
| V _{OLID} | Output Low Voltage | 2.85 to 5.5 | I _{OL} = 4 mA | | | 0.4 | V |
|-------------------|--------------------|-------------|------------------------|--|--|-----|---|

INPUT PIN (EN_N)

| | | | | | | | |
|--------------------|-------------------------------|-------------|---------------------|-----|--|-----|----|
| V _{IEN} | Low-Level Input Voltage | 2.85 to 5.5 | | | | 0.4 | V |
| V _{IHEN} | High-Level Input Voltage | 2.85 to 5.5 | | 1.2 | | | V |
| I _{CCTEN} | VDD Current when EN_N is HIGH | 2.85 to 5.5 | Worst Input Voltage | | | 2 | μA |

3-STATE INPUT AND PUSH/PULL OUTPUT PINS (PORT/DEBUG_N, ADDR/ORIENT)

| | | | | | | | |
|---------------------|--|-------------|-------------------------|--------------------|--|--------------------|----|
| V _{ILADDR} | Low-Level Input Voltage | 2.85 to 5.5 | | | | 0.2V _{DD} | V |
| V _{IMADDR} | Middle-Level Input Voltage | 2.85 to 5.5 | | 0.4V _{DD} | | 0.6V _{DD} | V |
| V _{IHADDR} | High-Level Input Voltage | 2.85 to 5.5 | | 0.8V _{DD} | | | V |
| Z _{float} | Impedance to VDD or GND detected as a FLOAT including when VDD = 0 | 2.85 to 5.5 | | 1 | | 4 | MΩ |
| V _{OLOUT} | Low-Level Input Voltage | 2.85 to 5.5 | I _{OL} = 1 mA | | | 0.2V _{DD} | V |
| V _{OHOUT} | High-Level Input Voltage | 2.85 to 5.5 | I _{OL} = -1 mA | 0.8V _{DD} | | | V |

I²C INTERFACE PINS – FAST MODE SDA/OUT1, SCL/OUT2

| | | | | | | | |
|---------------------|--|-------------|----------------------------|-----|---|-----|----|
| V _{ILI2C} | Low-Level Input Voltage | 2.85 to 5.5 | | | | 0.4 | V |
| V _{IHI2C} | High-Level Input Voltage | 2.85 to 5.5 | | 1.2 | | | V |
| V _{HYS} | Hysteresis of Schmitt Trigger Inputs | 2.85 to 5.5 | | 0.2 | | | V |
| I _{i2C} | Input Current of SDA/OUT1 and SCL/OUT2 Pins, | 2.85 to 5.5 | Input Voltage 0 V to 3.6 V | | | 2 | μA |
| I _{CCTI2C} | VDD Current when SDA/OUT1 or SCL/OUT2 is HIGH | 2.85 to 5.5 | Worst Input Voltage | | | 2 | μA |
| V _{OLSDA} | Low-Level Output Voltage at 2 mA Sink Current (Open-Drain) | 2.85 to 5.5 | I _{OL} = 2 mA | | | 0.3 | V |
| I _{OLSDA} | Low-Level Output Current (Open-Drain) | 3.0 to 5.5 | V _{OLSDA} = 0.4 V | 20 | | | mA |
| C _I | Capacitance for Each I/O Pin | 2.85 to 5.5 | | | 5 | | pF |

FUSB303B

Table 10. FAST MODE I²C TIMING SPECIFICATIONS (see Figure 7)

| Symbol | Parameter | Fast Mode | | |
|---------------------|---|-----------------------------|------|------|
| | | Min. | Max. | Unit |
| f _{SCL} | SCL/OUT2 Clock Frequency | | 400 | kHz |
| t _{HD;STA} | Hold Time (Repeated) START Condition | 0.6 | | μs |
| t _{LOW} | Low Period of SCL/OUT2 Clock | 1.3 | | μs |
| t _{HIGH} | High Period of SCL/OUT2 Clock | 0.6 | | μs |
| t _{SU;STA} | Set-up Time for Repeated START Condition | 0.6 | | μs |
| t _{HD;DAT} | Data Hold Time | | 0.9 | μs |
| t _{SU;DAT} | Data Set-up Time (Note 5) | 100 | | ns |
| t _r | Rise Time of SDA/OUT1 and SCL/OUT2 Signals (Note 6) | 20×(V _{DD} /5.5 V) | 250 | ns |
| t _f | Fall Time of SDA/OUT1 and SCL/OUT2 Signals (Note 6) | 20×(V _{DD} /5.5 V) | 250 | ns |
| t _{SU;STO} | Set-up Time for STOP Condition | 0.6 | | μs |
| t _{BUF} | Bus-Free Time between STOP and START Conditions | 1.3 | | μs |
| t _{SP} | Pulse Width of Spikes that Must Be Suppressed by the Input Filter | | 50 | ns |

- A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement t_{SU;DAT} ≥ 250 ns must be met. This is automatically the case if the device does not stretch the LOW period of the SCL/OUT2 signal. If such a device does stretch the LOW period of the SCL/OUT2 signal, it must output the next data bit to the I²C_{line} t_{r_max} + t_{SU;DAT} = 1000 + 250 = 1250 ns (according to the standard-mode I²C bus specification) before the SCL/OUT2 line is released.
- C_b equals the total capacitance of one bus line in pF. If mixed with high-speed devices, faster fall times are allowed according to the I²C specification.

Figure 7. Definition of Timing for Full/Speed Mode Devices on the I²C Bus

FUSB303B

REGISTER DEFINITIONS

Table 11. REGISTER MAP

| Address | Register Name | Type | Default | Bit7 | Bit6 | Bit5 | Bit4 | Bit3 | Bit2 | Bit1 | Bit0 |
|---------|---------------|--------------|-----------------|------------------|------------------|----------------|-----------------|----------------|-----------------|----------------|---------------|

7. Do not use registers that are blank

8. Values read from undefined register bits are not defined and invalid. Do not write to undefined registers

Table 12. DEVICE ID (Address: 01h, Reset Value: 0001_0000b, Type: Read Only)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|--------|-------------|---------------|--|
| 7:4 | VER_ID | 4 | 7:4 01h | Device version ID by Trim, etc. A_[REV_ID]: 0001 (FUSB303B A) |
| 3:0 | REV_ID | 4 | 3:0 00h | Revision History of each version [VER_ID]_revA: 0000 |

FUSB303B

Table 13. DEVICE TYPE (Address: 02h, Type: Read Only)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|------------------|-------------|---------------|---------------|
| 7:0 | DEVICE_TYPE[7:0] | 8 | 7:0 03h | 03h: FUSB303B |

Table 14. PORTROLE (See Note 9)

(Address: 03h, Reset Value: 0100_1nnnb (Reset value for bits nnn will be set by the state of the PORT/DEBUG_N pin either during power up when EN_N is LOW or when Vdd is valid and EN_N goes HIGH to LOW) or when SW_RES is set HIGH. In dead battery mode, nnn = 010 or configured as SNK) Type: Read/Write)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|-----------|-------------|---------------|--|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | ORIENTDEB | 1 | 6 1b | 1: When a Debug Accessory is found, continue to orientation detection if CC is on CC1 or CC2 (result is in Status.Orient[1:0]) |
| 5:4 | TRY[1:0] | 2 | 5:4 00b | 00: Disable (normal DRP detection for DRPs) 01: Enable Try.SNK state machine detection for DRP only 10: Enable Try.SRC state machine detection for DRP only 11: Disable (cannot have Try.SNK and Try.SRC active together) |
| 3 | AUDIOACC | 1 | 3 1b | 1: Enable Audio Accessory Support (Debug Accessory support is always enabled) |
| 2 | DRP | 1 | 2 n | 1: Configure device as a Dual Role Port (see reset value text above) |
| 1 | SNK | 1 | 1 n | 1: Configure device as a Sink (see reset value text above) |
| 0 | SRC | 1 | 0 n | 1: Configure device as a Source (see reset value text above) |

9. If DRP bit, SNK bit and SRC bit are all set to 1, then the priority of which Portrole the FUSB303B assumes is first priority is DRP, second priority is SNK and last priority is SRC. See Manual register note below for priority between Manual register bits and Portrole register.

Table 15. CONTROL

Address: 04h, Reset Value: 0100_0011b, Type: Read/Write

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|----------------|-------------|---------------|---|
| 7:6 | T_DRP[0] | 2 | 7:6 01b | Sets the total period of the DRP toggle cycle (i.e. Unattached.SNK period + Unattached.SRC period): 00: 60 ms 01: 70 ms 10: 80 ms 11: 90 ms |
| 5:4 | DRPTOGGLE[1:0] | 2 | 5:4 00b | Selects different timing for Dual Role Port Toggle between Unattached.SNK State and Unattached.SRC State. 00: 60% in Unattached.SNK and 40% in Unattached.SRC 01: 50% in Unattached.SNK and 50% in Unattached.SRC 10: 40% in Unattached.SNK and 60% in Unattached.SRC 11: 30% in Unattached.SNK and 70% in Unattached.SRC |
| 3 | DCABLE_EN | 1 | 3 0b | 1: Enable Dangling Cable internal methods to achieve a stable attach |
| 2:1 | HOST_CUR[1:0] | 2 | 2:1 01b | Controls the pull-up current when device enabled as a Source 00: Reserved. Do not use. 01: 80 μ A – Default USB Power 10: 180 μ A – Medium Current Mode: 1.5 A 11: 330 μ A – High Current Mode: 3 A |
| 0 | INT_MASK | 1 | 1b | 1: Global interrupt mask to mask all interrupts |

FUSB303B

Table 16. CONTROL1

(Address: 05h, Reset Value: 0010_0011b, Type: Read/Write)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|------------------|-------------|---------------|---|
| 7 | REMEDY_EN | 1 | 7 0b | 1: Enable the Remedy detection to employ internal methods to achieve stable attach |
| 6:5 | AUTO_SNK_TH[1:0] | 2 | 6:5 01b | Sets the weak battery VDD threshold voltage when AUTO_SNK_EN is enabled. 00: 3.0 V 01: 3.1 V 10: 3.2 V 11: 3.3 V |
| 4 | AUTO_SNK_EN | 1 | 4 0b | 1: Enable automatic Sink port role based on weak battery VDD threshold in bits AUTO_SNK_TH in Control register below |
| 3 | ENABLE | 1 | 3 0b | 1: Enable the FUSB303B if the external EN_N pin is LOW in I ² C mode (that is, not in GPIO mode) |
| 2:0 | TCCDEB[2:0] | 3 | 2:0 011b | Controls debounce time for attaching a device 000: 120 ms 001: 130 ms 010: 140 ms 011: 150 ms 100: 160 ms 101: 170 ms 110: 180 ms 111: Reserved |

Table 17. Manual (Note 10)

(Address: 09h, Reset Value: 0000_0000b, Type: Read/Write (see bits below: W/C = Write one self clearing, R/W = Read/Write and N/A = Not Applicable)

| Bit # | Name | R/W/C | Size (Bits) | Bit#: Default | Description |
|-------|-----------------------|-------|-------------|---------------|---|
| 7:6 | Reserved | N/A | 2 | 7:6 00b | Do Not Use |
| 5 | FORCE_SRC | W/C | 1 | 5 0b | 1: Forces the FUSB303B to behave as a Source |
| 4 | FORCE_SNK | W/C | 1 | 4 0b | 1: Forces the FUSB303B to behave as a Sink |
| 3 | UNATT_SNK | W/C | 1 | 3 0b | 1: Put device in Unattached.SNK State as defined in the Type C spec |
| 2 | UNATT_SRC | W/C | 1 | 2 0b | 1: Put device in Unattached.SRC state as defined in the Type C spec |
| 1 | DISABLED (Note 11) | R/W | 1 | 1 0b | 1: Put device in Disabled state as defined in the Type C spec |
| 0 | ERROR_REC | W/C | 1 | 0 0b | 1: Put device in ErrorRecovery state as defined in the Type C spec |

10. If more than one bit is set to 1b simultaneously then an order of priority will be used. First priority is DISABLED, second is ERROR_REC, third is FORCE_SRC, fourth is FORCE_SNK, fifth is UNATT_SRC, last is UNATT_SNK. The highest priority bit will take precedence and all other bits will be cleared automatically.

11. The DISABLED bit must be manually cleared. Also DISABLED bit has a higher priority over Portrole register since the DISABLED bit has to be cleared in order to execute the new Portrole register settings. However, all other Manual register bits don't have a lot of meaning if the Portrole register is changed and so Portrole register setting should have higher priority than all bits except for DISABLED bit.

Table 18. RESET

(Address: 0Ah, Reset Value: 0000_0000b, Type: Write/Clear)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|----------|-------------|---------------|--|
| 7:1 | Reserved | 7 | 7:1 00h | Do Not Use |
| 0 | SW_RES | 1 | 0 0b | 1: Reset the FUSB303B and I ² C Registers |

FUSB303B

Table 19. MASK

(Address: 0Eh, Reset Value: 0000_0000b, Type: Read/Write)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|------------|-------------|---------------|--|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | M_ORIENT | 1 | 6 0b | 1: Mask the I_ORIENT interrupt bit from asserting INT_N pin |
| 5 | M_FAULT | 1 | 5 0b | 1: Mask the I_FAULT interrupt bit from asserting INT_N pin |
| 4 | M_VBUS_CHG | 1 | 4 0b | 1: Mask the I_VBUS interrupt bit from asserting INT_N pin |
| 3 | M_AUTOSNK | 1 | 3 0b | 1: Mask the I_AUTOSNK interrupt bit from asserting INT_N pin |
| 2 | M_BC_LVL | 1 | 2 0b | 1: Mask the I_BC_LVL interrupt bit from asserting INT_N pin |
| 1 | M_DETACH | 1 | 1 0b | 1: Mask the I_DETACH interrupt bit from asserting INT_N pin |
| 0 | M_ATTACH | 1 | 0 0b | 1: Mask the I_ATTACH interrupt bit from asserting INT_N pin |

12. Masking the interrupt just does not cause INT_N to be asserted. The interrupt bit will still be asserted in the Interrupt register and so that an all zeroes Interrupt register value is not needed for INT_N to be deasserted.

Table 20. MASK1

(Address: 0Fh, Reset Value: 0000_0000b, Type: Read/Write)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|-------------|-------------|---------------|--|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | M_REM_VBOFF | 1 | 6 0b | 1: Mask the I_REM_VBOFF interrupt bit from asserting INT_N pin |
| 5 | M_REM_VBON | 1 | 5 0b | 1: Mask the I_REM_VBON interrupt bit from asserting INT_N pin |
| 4 | Reserved | 1 | 4 0b | Do Not Use |
| 3 | M_REM_FAIL | 1 | 3 0b | 1: Mask the I_REM_FAIL interrupt bit from asserting INT_N pin |
| 2 | M_FRC_FAIL | 1 | 2 0b | 1: Mask the I_FRC_FAIL interrupt bit from asserting INT_N pin |
| 1 | M_FRC_SUCC | 1 | 1 0b | 1: Mask the I_FRC_SUCC interrupt bit from asserting INT_N pin |
| 0 | M_REMEDY | 1 | 0 0b | 1: Mask the I_REMEDY interrupt bit from asserting INT_N pin |

13. Masking the interrupt just does not cause INT_N to be asserted. The interrupt bit will still be asserted in the Interrupt register and so that an all zeroes Interrupt register value is not needed for INT_N to be deasserted.

Table 21. STATUS

(Address: 11h, Reset Value: 0000_0000b, Type: Read Only)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|-------------|-------------|---------------|--|
| 7 | AUTOSNK | 1 | 7 0b | 1: AUTOSNK mode is activated since the VDD voltage is lower than AUTO_SNK_TH voltage |
| 6 | VSAFE0V | 1 | 6 0b | 1: Status to indicate VBUS_DET is below vSafe0V max of 0.8 Vpin |
| 5:4 | ORIENT[1:0] | 2 | 5:4 00b | Status to indicate which CCx pins has the cable CC connection 00: No or unresolved connection detected 01: Cable CC is connected through the CC1 (A5) pin 10: Cable CC is connected through the CC2 (B5) pin 11: A fault has occurred during the detection |
| 3 | VBUSOK | 1 | 3 0b | 1: Status to indicate VBUS_DET is in the valid VBUS 5V range |
| 2:1 | BC_LVL[1:0] | 2 | 2:1 00b | Thresholds that allow detection of current advertisement on CC line 00: (Ra or unattached) Sink or unattached Source 01: Rd threshold for Sink default current advertisement 10: Rd threshold for Sink 1.5 A current advertisement 11: Rd threshold for Sink 3 A current advertisement |
| 0 | ATTACH | 1 | 0 0b | 1: Attached to a device or accessory of a type shown in the Type register |

FUSB303B

Table 22. STATUS1

(Address: 12h, Reset Value: 0000_0000b, Type: Read Only)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|----------|-------------|---------------|--|
| 7:2 | Reserved | 6 | 7:2 00h | Do Not Use |
| 1 | FAULT | 1 | 1 0b | 1: Status to indicate that as a Sink, CC has exceed the normal vRd voltage range |
| 0 | REMEDY | 1 | 0 0b | 1: Status to indicate that FUSB303B is employing internal methods to achieve a stable attach |

Table 23. TYPE

(Address: 13h, Reset Value: 0000_0000b, Type: Read Only)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|-------------|-------------|---------------|---|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | DEBUGSRC | 1 | 6 0b | 1: FUSB303B is attached as a Source Debug Accessory ([Unoriented/Oriented]DebugAccessory.SRC) |
| 5 | DEBUGSNK | 1 | 5 0b | 1: FUSB303B is attached as a Sink Debug Accessory (DebugAccessory.SNK) |
| 4 | SINK | 1 | 4 0b | 1: FUSB303B is attached as a Sink (Attached.SNK) |
| 3 | SOURCE | 1 | 3 0b | 1: FUSB303B is attached as a Source (Attached.SRC) |
| 2 | ACTIVECABLE | 1 | 2 0b | 1: FUSB303B is attached to an Active Cable (Ra detected) |
| 1 | AUDIOVBUS | 1 | 1 0b | 1: Indicates an Audio Accessory with VBUS has been detected (AudioAccessory with VBUS) |
| 0 | AUDIO | 1 | 0 0b | 1: Indicates an Audio Accessory without VBUS has been detected (AudioAccessory without VBUS) |

Table 24. INTERRUPT

(Address: 14h, Reset Value: 0000_0000b, Type: Read/Write 1 to Clear)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|------------|-------------|---------------|--|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | I_ORIENT | 1 | 6 0b | 1: Interrupt flagged whenever ORIENT changes from 0,0 to 0,1 or 1,0 but not 1,1. Interrupt not flagged when ORIENT is cleared. |
| 5 | I_FAULT | 1 | 5 0b | 1: Interrupt flagged when CC1 or CC2 voltage exceeds normal Rd range when FUSB303B has Rd termination on CC1 and/or CC2 |
| 4 | I_VBUS_CHG | 1 | 4 0b | 1: Interrupt flagged when VBUS has crossed vVBUSthr or vVBthLH thresholds |
| 3 | I_AUTOSNK | 1 | 3 0b | 1: Interrupt flagged when AUTOSNK mode has been activated or deactivated |
| 2 | I_BC_LVL | 1 | 2 0b | 1: Interrupt flagged when a change in BC_LVL[1:0] advertised current level has occurred |
| 1 | I_DETACH | 1 | 1 0b | 1: Interrupt flagged when a device or accessory has been detached |
| 0 | I_ATTACH | 1 | 0 0b | 1: Interrupt flagged when a device or accessory of type indicated in the Type register has been attached |

FUSB303B

Table 25. INTERRUPT1

(Address: 15h, Reset Value: 0000_0000b, Type: Read/Write 1 to Clear)

| Bit # | Name | Size (Bits) | Bit#: Default | Description |
|-------|-------------|-------------|---------------|---|
| 7 | Reserved | 1 | 7 0b | Do Not Use |
| 6 | I_REM_VBOFF | 1 | 6 0b | 1: Interrupt to request VBUS be turned off and discharged while executing internal methods to achieve stable attach |
| 5 | I_REM_VBON | 1 | 5 0b | 1: Interrupt to request VBUS be turned on while executing internal methods to achieve stable attach |
| 4 | Reserved | 1 | 4 0b | Do Not Use |
| 3 | I_REM_FAIL | 1 | 3 0b | 1: Interrupt to indicate that internal methods to achieve stable attach have failed. |
| 2 | I_FRC_FAIL | 1 | 2 0b | 1: Interrupt to indicate that FORCE_SRC or FORCE_SNK has failed to execute either because it was being forced into a state it was already in or for other reasons |
| 1 | I_FRC_SUCC | 1 | 1 0b | 1: Interrupt to indicate that FORCE_SRC or FORCE_SNK has successfully being executed. |
| 0 | I_REMEDY | 1 | 0 0b | 1: Interrupt to indicate that detection issues caused FUSB303B to employ internal methods to achieve stable attach |

ORDERING INFORMATION TABLE

Table 26. AVAILABLE PART NUMBERS

| Part Number | Top Mark | Operating Temperature Range | Package | Packing Method† |
|-------------|----------|-----------------------------|---|-----------------|
| FUSB303BTMX | UN | -40 to 85°C | 12-Lead Ultra-thin Molded Leadless Package (QFN) 1.6 mm x 1.6 mm x 0.375 mm | Tape and Reel |

†For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.

DETAIL B

NOTES:

1. DIMENSIONING AND TOLERANCING PER ASME Y14.5M, 2009.
2. CONTROLLING DIMENSION: MILLIMETERS
3. DIMENSION b APPLIES TO THE PLATED TERMINALS AND IS MEASURED BETWEEN 0.10 AND 0.20mm FROM THE TERMINAL TIP.
4. PROFILE APPLIES TO THE EXPOSED PAD AS WELL AS THE TERMINALS.

| DIM | MILLIMETERS | | |
|-----|-------------|-------|------|
| | MIN. | NOM. | MAX. |
| A | 0.34 | 0.37 | 0.40 |
| A1 | -- | -- | 0.05 |
| A3 | 0.127 REF | | |
| b | 0.15 | 0.175 | 0.20 |
| D | 1.55 | 1.60 | 1.65 |
| E | 1.55 | 1.60 | 1.65 |
| e | 0.40 BSC | | |
| L | 0.25 | 0.30 | 0.35 |
| L2 | 0.45 | 0.50 | 0.55 |
